- Christmascore.com
- Merrychristmasmoments.com

3. Description of sites purpose:

The purpose of this site is to give as much information and inspiration as possible when it comes to Christmas. Christmas is my favorite holiday and I truly wish that it could be celebrated longer because there are so many fun festivities to take part in! Through this website, my goal is to spark excitement and joy for the holiday season by offering resources and my own personal festive favorites. I will highlight some of the best activities to do in the Chicagoland area during the holidays, implement a Christmas countdown, and share some of my favorite holiday baking treats and recipes. I also plan to include a section for Christmas movies and music that I think others should watch/listen to and provide inspiration/ideas for Christmas decorations. In summary I want to be able to provide a Christmas hub for users to go to so that they can make the most out of their holiday season.

4. A few paragraphs explaining design choices:

The design of my wireframes focus on simplicity and clarity. The home page features a main banner and introduction text to immediately engage visitors and make information accessible. When I was making the home page, tip number six, stick to standard layouts, from the reading in the design principles section, “27 Research-Backed Web Design Tips: How to Design a Website That Works” was important to me because I think it’s important to format a website that aligns with other website standards because that is what users are most familiar with. I also wanted to have the different directory buttons at the top on every page because it’s important for the user to always have a way to get to the next page or previous one easily. I didn’t want to include important information on the home page carousel because it is designed to be a rotating banner of images, I just wanted to have different Christmas images for that Christmas time feeling. I would say I followed tip number eight here because although I have a carousel, it’s not filled with important information the user might miss, it just serves as a design choice for more photos to be rotated. I also followed tip number 16 by keeping “home” on the left.

The events and baking pages are organized to guide the user's attention effectively, showing one thing at a time to reduce visual complexity. In all of my pages I avoided long paragraphs of text and want to keep the text short so viewers can skim. My main goal with this site is to make it a fun experience, a virtual christmas time if you will, so I tried to keep each page simple and have clear distinction from each other. I also didn’t want any of the pages to feel too similar. I tried to create a different layout for

them, but nothing that was crazy different that wouldn't make them cohesive. For wireframe number four for my website, I created jump links to guide the user so they wouldn't have to scroll through and wonder if they're still in movies or music. I might get more advanced with this and do jump links and differentiate Christmas movies that are animated, have multiple parts, musicals etc.

Lastly, the external links for the decor page enhances user experience by creating easy navigation and direct access to the products that they saw on my site. This follows the advice to make navigation descriptive and user-friendly. Also, including email links on the contact page ensures clear communication and lets the user be able to contact us without having to go through any extra steps. The overall design of my site is to provide users with information and inspiration that they can incorporate into their Christmas season with friends and family.

5. Submission includes citations/references as/where needed

I referenced the reading I primarily used when I was considering design choices, "27 Research-Backed Web Design Tips: How to Design a Website That Works."

6. Wireframe consists of at least 4 webpages:

Yes, I have 6.

7. Wireframe includes at least 1 link to an external site:

Yes, I have 3 listed in my wireframe with descriptions.

8. Wireframe includes at least 1 email link:

Yes, on the contact page there is an email link.

9. Wireframe includes at least 1 jump link:

Yes, there are two jump links in my wireframe with a detailed description in "4. A few paragraphs explaining design choices."

10. Wireframe includes at least 2 relevant images.

Yes, I included multiple image place holders in my wireframe. There are placeholders for photos of holiday desserts, Christmas movies, decor, and holiday events.
